Straive

AI Transformed Enterprise Operations

Archetype 3

Presented to

Title

Straive works across the education system, from the learning experience to the enterprise behind it

A point of view shaped by work across content, products, data, AI, learner experience and operations.

Content & curriculum	Product & platforms	Data & AI	Learner experience	Enterprise operations
Learning assets	Digital layer	Intelligence layer	Relationship layer	Operating layer

300+ education clients

20M+ learners supported globally

10,000+ subject matter experts

20,000+ professionals

Publishers · EdTech · Universities · Virtual schools · State and local education · Workforce learning

Awards & Recognition

Nasscom game changer, Financial Times APAC High Growth Companies

Domain Awards
The Cloud Awards (Fintech), Globee® Awards for Artificial Intelligence, Artificial Intelligence Excellence Awards, ET AI awards 2026, Newsweek AI Impact, AI Breakthrough Award, Global waste management

GCC
GCC One Award, GCC AI Visionary Award, GCC Excellence Awards (MachineCon GCC Awards), The Economic Times GCC Annual Awards 2026

FT Best Employers Asia-Pacific 2026

That breadth gives us a view across both the learning business and the enterprise that supports it.

Across the Education landscape, four shifts are changing how organizations create value

These are market signals we see repeating across learning companies, institutions, technology platforms and operating models.

01 Learning is becoming continuous, personalized and outcome-led

From

Fixed catalog + periodic refresh

Toward

Living learning experiences that adapt and improve

Living content
Shorter cycles
Learner-driven formats

Market signal

Leaders embedding AI tutors directly in courseware. Study support that actually adapts to *your* student.

02 The learner relationship is becoming persistent

From

Separate learning, advising and support interactions

Toward

One learner context across the institution

One persistent student story across all systems

Market signal

Student journey platforms are now persistent. Your advising system remembers what your learning system knows. Silos disappearing.

03 Data, products and AI are becoming one adaptive foundation

From

Modernize data → rebuild platform → Add AI

Toward

Use the existing estate, add context and make it AI-ready

Evolution, not replacement. Intelligence, not overhaul.

Market signal

AWS, Azure, Google all building unified data + AI stacks. Institutions are following suit i.e. governed data as foundation

04 Operating models are shifting from capacity to capability

From

Teams supplying effort

Toward

Teams owning outcomes with people + agents

AI handles repetition and Teams own outcomes

Market signal

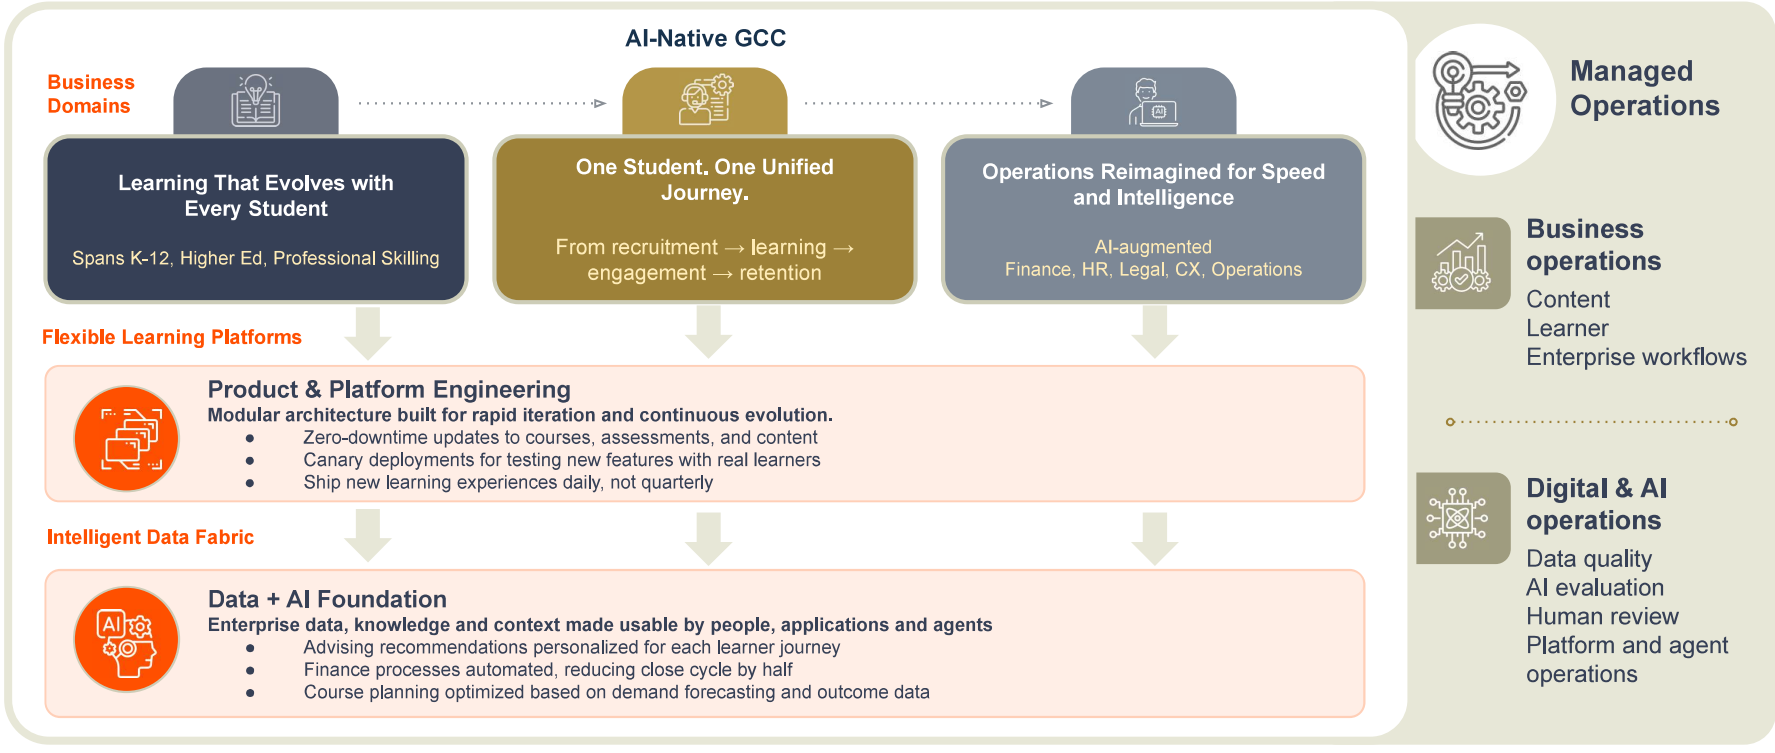

Leaders reshaping GCCs around AI teams, specialists, and agents. Measured by innovation speed, not budget compliance.

These shifts are connected. Together, they are changing the shape of the education enterprise.

The AI-Native Education Enterprise: A New Operating Model

"It's not about buying another tool. It's about reimagining how your entire organization learns and evolves.

AI-native is not a separate AI layer. It is an operating model in which content, learner experiences, products, data and workflows can evolve together.

© 2026 Straive. All rights reserved | www.straive.com

Building Capability, Not Betting on Platforms: A New Transformation Playbook

Transformation is no longer a three-year project. It's a continuous capability that gets better with every iteration.

01 Start with the business outcome

Framing problem around learner journeys, content process, product or enterprise workflow rather than around technology or AI.

Focus on student retention and content accuracy

02 Work with what already exists

Use current content, systems and data where they remain useful. Add the context and connectivity required for the next capability.

Modernize selectively, not indiscriminately

03 Design for continuous change

Assume content, models, interfaces and processes will keep changing. Build the ability to update them into the operating design.

Change becomes part of the system

04 Design for production from day one

Evaluation, provenance, security, human review and operational ownership are part of the capability from the beginning.

Reliable enough to publish, teach from, advise against or act on

The objective is not a one-time AI implementation. It is a business capability that can keep learning, changing and operating.

© 2026 Straive. All rights reserved | www.straive.com

Not All Transformations Are the Same. Pick Your Starting Point

Your specific challenge might live in one domain or span multiple. Choose the entry point that matches your problem statement.

01 Start with a use case

Test a Bold Idea in a Safe Space

Business objectives are clear and you need evidence before a wider decision.

For A Large Publishing House

- Piloted **centralized data warehouse with one division**
- Consolidated 2.5 years of data from 3 platforms
- **Measured:** faster queries, reduced manual pulls, 40% reporting lift
- Validated single source of truth before enterprise rollout
- **Proved ROI and reduced deployment risk**

Prove the idea.

02 Start with a workflow

Redesign the full process, not just one step.

Several tasks or systems creating friction and automating one step will not materially change the result.

For A Digital Curriculum Platform

- **Mapped full workflow:** From research and design to production and QA
- **Identified bottlenecks:** research synthesis and drafting
- **Redesigned:** AI handles repetitive work, experts handle quality.
- **Achieved XX faster time-to-market while improving quality**

Redesign the flow.

03 Start with an operation

Start with a non-critical but well settled operation

Process already operates at scale and continuity, quality and service levels matter.

For a State Education Department

- **Served 245 school districts with fragmented systems**
- **Replaced manual, semi-annual uploads** with **nightly automated updates**
- Implemented **Ed-Fi ODS and customized dashboards**
- Delivered real-time **dashboards to 245 districts, zero downtime**

Run today's operation while building tomorrow's.

04 Start with a capability

Create a dedicated multidisciplinary capability around a strategic need

Sustained capacity, continuity and cross-functional capability matter to the business.

For A HigherEd EdTech

- **Built dedicated 25-person team** (product, data, AI, domain experts)
- **Focused on 3 interconnected initiatives**
- **Reduced time-to-market by 50% for AI features**
- **Achieved XX NPS,** embedded AI across all products **in 18 months**
- Created **continuous innovation engine**

Build a capability, not a pool of resources.

Start at the level that matches the problem

Starting point depends on your readiness. Your destination is the same: Competitive advantage through AI-native operations.

Our Archetypes

6 Archetypes. One AI-Powered Advantage

End-to-end solutions that transform how organizations create, operate, engage, and grow

- **1a** AI-Led K-12 Course & Content Development, Modernization, Transformation, and Maintenance
- **1b** AI-Led Skilling and Upskilling Courses for Working Professionals
- **1c** HE Online Program Development for Large Online Universities
- **1d** AI-Transformed Operations (Publishing / Content) + Volume

- Access to global talent & expertise
- Operational excellence & best practices
- AI-powered delivery & automation
- Cost efficiency with strategic impact
- End-to-end product engineering
- Cloud-native & API-first solutions
- Agile delivery at scale
- Continuous innovation & quality

- Personalized guidance & academic support
- 24/7 engagement across touchpoints
- Improved retention, satisfaction, & outcomes
- Actionable insights for institutions
- Intelligent process automation
- Better decisions with real-time insights
- Reduced cycle times and operational costs
- Scalable across functions
- Modern data platforms & architecture
- Advanced analytics & AI/ML insights
- Data quality, governance, and security
- Scalable, future-ready foundations

One partner. Six archetypes. Infinite possibilities.
Empowering organizations to reimagine, transform, and lead.

POINT OF VIEW

Education Doesn't Need Another AI Go-Live

It needs an operating model where the learner journey and the back office run as one system of work.

Universities, online colleges and K–12 institutes still buy technology the SaaS way: pick a pain, pick a tool, declare go-live, move on. That worked when software sat inside one box on the org chart and mostly coordinated by humans.

AI is different. It does not stop at the contact center or the finance queue. It performs work that crosses enquiry, application, enrollment, onboarding, support, aid and billing and the exceptions that stall a learner mid-journey. It has a starting point, not a finish line.

The value isn't another bot in the stack. It's what the institution becomes when CX and Enterprise Operations are redesigned and run as one operating model.

Most education organisations are running an AI adoption program when what's required is an operating-model transformation. One ends with new tools inside old handoffs. The other ends with an institution that moves at the speed of the learner.

HOW BUYERS FRAME IT

MARKET NOTE

Buyers still compare AI to another platform licence — a seat count, a bot, a module on next year's roadmap. Answer that question and you are priced against software. Answer the operating question and you are measured on the work itself.

Lead with the operating model.

© 2026 Straive. All rights reserved | www.straive.com

WHY THIS ARCHETYPE

Where the Learner Journey Breaks

Five stages where the work fails — and where Customer Experience and Enterprise Operations need to run as one system.

01 — Discovery & Nurturing

CX

Enquiries spike, follow-up slips

Prospective students wait days for an answer. Intent goes cold before anyone calls back.

02 — Application & Enrollment

CX + E-OPS

Peak load stretches the cycle

Applications, documents and aid queries arrive together. Manual checks stretch decision time.

03 — Onboarding

E-OPS

The first weeks decide retention

Records, accounts, LMS access and rosters are set up by different teams. Gaps return as tickets.

04 — Learning & Engagement

CX + E-OPS

Support volume outruns staff

Helpdesk, billing and platform queries compete for the same people. Cost-to-serve climbs.

05 — Continuity & Alumni

CX + E-OPS

Re-enrollment is left to chance

Transcripts, credentials and outreach stay manual. Churn shows only after the student has gone.

THE USUAL FIX

Add a bot to the enquiry form. Buy a finance workflow. Automate a clause check. Declare go-live. Front office and back office still don't move together — so the learner still feels every handoff.

WHAT WE SOLVE FOR

This archetype owns the operating work around the journey: **Customer Experience** at the front of house, **Enterprise Operations** in the back office — redesigned and run on one governed layer so student conversations and back-office records move on the same operating layer.

The ambition: efficiency, accuracy and employee productivity — staff time returned to students, not to systems.

© 2026 Straive. All rights reserved | www.straive.com

WHAT WE TRANSFORM

Two Pillars, One Operating Model

Customer Experience across the service stack. Enterprise Operations across back-office transactions and five functions.

PILLAR 1

Customer Experience

The service stack a learner actually meets.

01 Self-service
Enquiry, FAQ, portal, fee and document questions

02 Smart triage
Intent, sentiment, urgency — clean handoff

03 Digital workers
Autonomous + supervised resolution

04 Expert assist
SME copilots on aid appeals and complex cases

+

PILLAR 2

Enterprise Operations

Back-office transactions plus function coverage - land one, expand.

Records · Billing · Collections · Licensing · Provisioning	
F&A	Finance workflows
HR	People ops
Tech Ops	IT & LMS support
Legal	Contracts & abstraction
Lead Gen	Pipeline acceleration

ONE GOVERNED OPERATING LAYER

Process design, AI, people and controls sit under both pillars. That is why a CX lane and an F&A function can expand on the same foundation.

© 2026 Straive. All rights reserved | www.straive.com

CUSTOMER EXPERIENCE SOLUTIONS

Orchestrating Student Support Across the Service Stack

Unified CX technology: lower cost, elevated experience, unlocked capacity.

TIER 0
Self-service

Cortexa (RAG) with citations & guardrails.
Voice & chat FAQ. IM assist.

~40–50% deflection

IN EDUCATION

Fee deadlines, portal access resets, "where is my document".

ROUTING
Smart triage

Intent, sentiment, urgency.
Clean handoff into the stack.

>90% routing accuracy

IN EDUCATION

Aid query, billing dispute or IT access — sorted on arrival.

TIER 1 / 1.5
Digital workers

Autonomous + supervised workflows.
Audit on high-risk actions.

~18–25% autonomous resolve

IN EDUCATION

Refund status, document chase, enrollment updates.

TIER 2
Expert assist

Chat & email/case copilots.
SME L1–L3 acceleration.

~30–35% shorter AHT

IN EDUCATION

Escalated aid appeals and complex account issues.

A PEAK-SEASON TEST

GLOBAL EDUCATION PROVIDER · OMNI-CHANNEL

Enrollment peak arrived with the usual spike across chat, email and voice. One capacity model spanning live and non-live channels absorbed it — no seasonal hiring scramble, no SLA breach, no cohort left waiting.

97%+ quality held.

ONE STACK, EVERY CHANNEL

Email · Chat · Voice · Social · Messaging · Self-service portal · Case & ticket queues

Full-stack pattern: up to ~40–50% lower average cost per query across the integrated service stack.

© 2026 Straive. All rights reserved | www.straive.com

ENTERPRISE OPERATIONS SOLUTIONS

Modernizing Functional Operations for Precision, Compliance and Scale

Back-office transaction work plus five function areas — land one, then expand on the same governed operating layer.

BACK-OFFICE TRANSACTION OPS

Records & documentation
Student records, transcripts, credentials

Billing & collections
Invoicing, refunds, AR recovery

Orders & claims
Fulfilment, exceptions, reconciliation

Licensing & rights
Entitlements, rights clearance

Provisioning
Accounts, rostering, access

FUNCTION COVERAGE

F&A
Finance workflows

Cash application, AP, refunds, collections assist and variance reporting — controls and human review intact.

HR
People ops

Hiring, onboarding and people-ops workflows. Repetitive steps automated; human review on sensitive decisions.

Tech Ops
IT & LMS support

Helpdesk and LMS or application support at scale. Routine tickets deflected; SLAs protected.

Legal
Contracts

Abstraction, clause extraction, policy mapping and risk flagging — reviewer and approver retained.

Lead Gen
Pipeline

Capture, enrich, route and follow-up assist — throughput lifted without adding headcount.

ONE FUNCTION, THEN FIVE

HIGH-VOLUME BILLING OPERATION · AR & COLLECTIONS

An AI workboard ranked who to call and why, so recovery effort followed value instead of list order. The same governed layer then carried refunds and reconciliation — a second function on the first function's foundation.

Faster cash, no added headcount.

© 2026 Straive. All rights reserved | www.straive.com

IN EDUCATION

The Learner Journey Is the Operating Map

Five stages the learner moves through — CX at the front, Enterprise Operations behind it.

01 Discovery & Nurturing	02 Application & Enrollment	03 Onboarding	04 Learning & Engagement	05 Continuity & Alumni
CUSTOMER EXPERIENCE — FRONT OF HOUSE, EVERY CHANNEL				
• Agentic Lead Engagement • AI Program Recommender • RFI & query assist • Voice bot	• AI Form Assist • Financial Aid Bot • Application status queries	• AI Onboarding Assistant • First-30-days query support	• Persistent Assistant • Video chat & IM support • Tier 1–2 student support	• Alumni Engagement Hub • Exit Interview Bot
ENTERPRISE OPERATIONS — BACK OFFICE, RECORDS & FUNCTION OPS				
• Lead intent scoring • Marketing funnel analytics • Pipeline routing & follow-up	• Agentic Enrollment Co-pilot • Transcript & credit mapping • Aid verification & refunds	• Onboarding tracking co-pilot • Account, LMS & roster provisioning • Student records set-up	• LMS & IT helpdesk at scale • Billing, refunds, collections • Retention analytics	• Credential verification • Transcripts & records • Re-enrollment outreach ops

K–12 · INSTITUTES & EdTECH — THE SAME TWO RAILS

Score the district › Win the bid › Clear trust review › Launch & roster › Show adoption › Renew with proof

CX carries the family and district conversations. Enterprise Operations carries rostering, provisioning, records, contract and renewal work.

Teaching, learning, and wellbeing stay with academic partners. This archetype runs the operating work around the journey.

© 2026 Straive. All rights reserved | www.straive.com

THE COMPOUNDING RETURN

Not Only Faster Work — Insight You Did Not Have Before

As we operate CX and Enterprise Operations, the operated volume becomes decision advantage through analytics & insights.

01

Reimagine

First-principles redesign of the workflow. No AI on a broken process.

02

Build & run

AI and people on the new process — CX stack and Enterprise Ops on one layer.

03

Bring value back

Insight & Analytics from operated volume: where journeys drop off, which exceptions repeat, what to fix next.

Insight feeds the next redesign. Each operated cycle compounds — the third pass is smarter than the first.

WHAT LEADERSHIP GETS BACK

01 **Where it drops off** *(Journey Analytics)*

Journey and process breakpoints previously invisible in the noise

Applications stalling at transcript and document upload; support spikes tied to aid and billing windows

02 **What keeps repeating** *(Exception Analytics)*

Exception patterns that used to stay buried in day-to-day work

The same aid-verification and refund failures each cycle; the same clause types driving legal rework

03 **What to fix next**

A prioritized agenda for the next redesign cycle

Target the few document types driving most enrollment backlog; redesign the handoff behind peak-season ticket surge

Efficiency is the entry point. The compounding return is an institution that can see — and act on — where the work breaks. That turns CX and Enterprise Operations into a decision system, not only a cost line.

© 2026 Straive. All rights reserved | www.straive.com

PROOF

Outcomes We Have Already Delivered

Results across both pillars — student support, cash, contracts and pipeline.

CUSTOMER EXPERIENCE

Student Support

GLOBAL EDUCATION PROVIDER · MULTI-STAKEHOLDER

- 97%+ quality, 4.5 CSAT sustained
- Peak season held across channels
- Many stakeholders, one service model

Quality held at peak.

ENTERPRISE OPS · F&A

Collections & AR

HIGH-VOLUME BILLING OPERATION

- High-volume recovery operated end to end
- AI workboard ranks who to call and why
- Effort follows value, not list order

Faster cash outcomes.

ENTERPRISE OPS · LEGAL

Contracts

ENTERPRISE LEGAL TEAM · HIGH VOLUME

- Clause-level extraction and risk scoring
- Reviewer and approver retained
- Specialist time off routine review

Less specialist rework.

ENTERPRISE OPS · LEAD GEN

Demand & Pipeline

EDUCATION & EdTECH DEMAND GENERATION

- Validate, enrich and route as one process
- Follow-up assist on every qualified lead
- An operated process, not a point tool

Conversion 11% → 42%.

WHY THE PATTERN REPEATS
ACROSS ALL FOUR PROGRAMMES

None of these started as an AI project. Each began by redesigning one process end to end, then running it — which is why the gains held after go-live instead of fading once the pilot team moved on.

Reimagine first, then operate.

Delivered across universities, online colleges, K–12 institutes and EdTech providers. Named references available under NDA.

© 2026 Straive. All rights reserved | www.straive.com

HOW WE DO IT

Configuration, Not Rebuild

Indicative 8–14 weeks to first live process in production.

~60% reusable Straive foundation
Platform, connectors, security, model routing

~40% client configuration
Process design, knowledge, workflows, SLAs

01
Discover
Volumes, systems, exceptions, success metrics

02
Reimagine
End-to-end redesign — no AI on a broken process

03
Configure
Connect CRM / ERP / SIS / CC; harden; pilot

04
Operate
Steady state and insight loops

8–14 weeks → first live process in production

ENTERPRISE SYSTEMS — LOW LIFT

Salesforce and peer systems: connectors and configuration and not a greenfield rebuild. Customers should expect a fast hook-up to the stack they already run.

FROM POINT TOOL TO PROCESS
EDUCATION DEMAND GENERATION

Validate, enrich and route stopped being three disconnected tools and became one operated process.

Conversion 11% → 42%.

© 2026 Straive. All rights reserved | www.straive.com

WHY STRAIVE · PATH FORWARD

Built to Run the Work, Not to License a Chatbot

Four reasons institutions choose us and a low-risk way to start.

Two pillars, one layer

CX service stack and Enterprise Ops functions (F&A, HR, Tech Ops, Legal, Lead Gen) on one governed model.

Reimagine, then operate

End-to-end process change with pods, managed, or outcome-based delivery until it sticks.

Efficiency, accuracy, productivity — then insight

Outcomes that match the archetype, plus value brought back from operated volume.

On your stack, governed

Low-lift connectors. Policy before every model call. Human approval on high-risk actions.

01 Workshop

Map CX + Enterprise Ops pressures and handoffs

02 Pilot

One CX lane or Enterprise Ops function

03 Prove

Outcomes + first insight pack

04 Scale

Expand on the same governed layer

“Can we buy the technology only?” Yes — with conditions. Most durable value lands when technology is embedded in a managed or hybrid model, delivered through pods. Detail in the appendix.

A starting point, not a go-live. Demos and pursuit-specific deep dives follow.

© 2026 Straive. All rights reserved | www.straive.com

CASE STUDY 02 · EDUCATION CX

Consolidating Nine Stakeholder Groups Into One Operating Model

Multi-division education publisher — K-12, Higher Ed, research, workforce, and consumer on one offshore model

02 **Leading global education publisher with nine internal stakeholders and a fragmented CRM across product lines.**

Scope · ~360K CX and tech-support interactions/year | ~67K order entries/year | ~83K marketing leads/year | Omni-channel

Challenge

- **Nine stakeholders:** each running a different process and product type
- **CRM & infrastructure:** split by division — duplicate cost, no single customer view
- **Knowledge leakage:** walked out when work moved; 24x7 coverage did not exist
- **Cost reduction:** had to fall without losing course discovery, access, or support

Approach

- **Dedicated pods:** by project and product type so knowledge stayed with the work
- **Standardized CRM:** one standardized CRM across divisions — infrastructure cost down ~25%
- **Broad coverage:** across enrollment, invoicing, digital access, support, and renewals
- **24x7 coverage:** ramped across K-12, Higher Ed, research, workforce, and consumer

~60%
Annual Savings
~150 roles offshore in 2 years

360k
Interactions / Year
Calls, emails, and chats processed

~25%
CRM Savings
Infrastructure cost saved on one CRM

24x7
Global Coverage
Continuous support across divisions

© 2026 Straive. All rights reserved | www.straive.com

CASE STUDY 03 · COLLECTIONS

Recovering Written-Off Debt at 100,000 Invoices per Month

Global STM publisher — billing, collections, clearing, and write-off recovery across APAC, EMEA, and the Americas

03 **Multi-region collections portfolio on S/4HANA, SAP FSCM, Salesforce, and Five9 — with AI contact search and an email assistant in the collector workflow.**

Scope | 100K+ invoices/month · 50+ FTEs (APAC, EMEA, Americas) | AI: contact search, email assistant, Power BI, predictive analytics | Cadence: Daily / weekly / monthly

Challenge

- **High-volume book:** Aging accounts collectors could not prioritize invoices by hand
- **Idle written-off debt:** Right-party contact rates were too low to enable recovery
- **Leaked effort:** Duplicate tickets and a weak dunning path wasted resources
- **Siloed regions:** Leaders lacked a single worklist, forecast, and recovery motion

Approach

- **Prioritized worklist:** Target accounts 60+ days older with pre-due date dunning checks
- **AI Contact Search:** Surfaces phone and email to connect collectors to right parties
- **Integrated workflow:** Email assistant, Power BI, and predictive analytics in daily cadence
- **Write-off desk:** Installment plans, record updates, and dedicated recovery team

€520M+	€75M+	42%	25%+
Total Collected	**Debt Recovered**	**Aging Lift**	**CEI Uplift**
Collected since go-live · ~ €140M / year	Written-off debt recovered in 6 months	Lift on 60-day+ aging via prioritized worklist	Uplift in collection-effectiveness index

© 2026 Straive. All rights reserved | www.straive.com

CASE STUDY 04 · COLLECTIONS / AR

Accelerating Collections to $475M With an AI-Assisted Workboard

Leading publisher — A/R stand-up in two months, then an AI workboard that ranks who to call and why

04 **A/R back-office transitioned to Straive. English and German coverage from 35+ agents, team leads, and analysts. Dashboards on Power BI / Tableau against S/4HANA.**

Scope | Collection, clearing, follow-up · 35+ multilingual agents | AI: transcript audit, ML cash forecast, prescriptive prioritization, DataChat | Daily / weekly / monthly cadence

Challenge

- **Speed pressure:** Receivables needed a two-month stand-up — not a multi-quarter transformation
- **No prioritization:** Collectors had no ranked workboard; aging, disputes, and broken promises sat in separate reports
- **Manual forecasting:** Cash-inflow forecasts were manual; leadership could not see payer, timing, and amount together
- **Siloed insights:** Root causes of non-pay lived in call transcripts and never reached the next day's list

Approach

- **Rapid setup:** A/R back-office live in two months, with automated outstanding / collected / broken / disputed dashboards
- **Diagnostic AI:** Scans transcripts for payment objections and intent
- **Predictive engine:** ML forecasts inflow by payer, timeline, and amount; prescriptive AI ranks high-risk and longest-aging accounts
- **Workflow integration:** Operations uses conversational DataChat in the daily huddle — the model sits in the workflow, not in a lab

$475M+	22%+	95%+	2 mo
Total Collected	**DSO Reduction**	**Collection Effectiveness**	**Ramp to Live**
Collected since program start (May '25)	Reduction in days-sales-outstanding	Collection effectiveness within 4 months	A/R back-office ramp to live operations

© 2026 Straive. All rights reserved | www.straive.com

CASE STUDY 05 · LEGAL OPS

Clause-Level Risk Scoring With Human Approval Retained

Leading publisher — legal and procurement agreement processing with automated parse and human sign-off

05 **High-volume agreement book. Clause language was verbose, review was manual, and risk was invisible until a lawyer finished the read.**

Scope | Legal + procurement agreements | Deep learning on the legal corpus | Multi-label clause classification (category + risk) | Reviewer–approver HITL with feedback loop

Challenge

- **Volume & verbosity:** Made every agreement a slow, error-prone read
- **Clause-level risk:** Lived inside individual clauses, found late instead of at header
- **No standard score:** Two reviewers could tag the same clause differently
- **Zero feedback:** Nothing learned from yesterday's review; started from zero

Approach

- **Custom LLMs:** Trained on legal corpus for category and risk classification
- **Smart identification:** Parses agreements, classifies clauses, and flags risk
- **Interactive workflow:** Reviewer–approver workflow corrections train next run
- **HITL by design:** Model proposes risk flags while legal still owns sign-off

12–15%
Efficiency Gain
Lesser time to process a legal agreement

Parse → flag
Automated Parsing
Every clause scored for category and risk

HITL
Human-in-the-Loop
Reviewer–approver on every single risk flag

Closed loop
Continuous Learning
Re-classifications feed the next model run

© 2026 Straive. All rights reserved | www.straive.com

CASE STUDY 06 · LEAD GEN

Lead Conversion Improved From 11% to 42%

U.S. education technology provider — contact and demand development that validates, enriches, routes, and converts

06 **Marketing-qualified leads were stalling before sales. Straive ran validation and conversion across the US, Canada, and EMEA.**

Scope | 1,000+ accounts in the conversion motion · 23 FTEs · US / Canada / EMEA | Email-first validation (up to 3 follow-ups / 8 business days) | Daily / weekly / monthly cadence

Challenge

- **Raw customer data:** Was not becoming a qualified sales lead — no validation step, no owner
- **Unproven legitimacy:** Inquiry legitimacy was unproven; sample-copy and course-intent signals were not captured
- **Incomplete CRM records:** Sales inherited noise instead of qualified opportunities
- **No structured cadence:** First touch, follow-up, and close-out left to individual habit

Approach

- **Contact Development:** Validates by email — three attempts over eight business days, then close-out
- **Demand Development:** Writes product, course, semester, seats, decision type, and notes to CRM
- **Routed opportunities:** Sent to named sales contact; fixed outreach schedule manages progression
- **Peak-season plan:** Monthly KPI reviews protect conversion when volume spikes

11% → 42%

SECURITY & GOVERNANCE

Security and Governance Framework

Dedicated client environment. Continuous policy enforcement triggered prior to every LLM request.

01

Dedicated Control Plane

Multi-Layer Defense

- Dedicated client AWS landing zone — not a multi-tenant data pool
- Six-layer defense: sanitize, isolate prompts, filter, gate actions, verify output, audit
- Actions blocked by default; allowlisted tools behind approval gates

02

Privacy Policy Gateway

Data Protection

- Every model call passes the gateway first — allow, mask, tokenize, block, or escalate
- Customer data is not used for model training unless authorized in writing
- Risk-based PII/PHI handling; cardholder and DTMF data stay off the LLM path

03

Model Governance

Approved Routes Only

- Amazon Bedrock is the primary private inference route; fallback is restricted and logged
- Approved model registry with version pinning and risk-based tiered routing
- High-impact finance, legal, identity, or record changes require human approval

04

Compliance & Evidence

Shared Responsibility

- SOC 2 Type II report and ISO/IEC 27001 certified ISMS available under NDA
- Controls mapped to GDPR, FERPA, COPPA, and PCI DSS where applicable
- Full audit trail, production kill switch, and documented safe fallback

A dedicated client tenant with a policy gateway in front of every model call — structured so security and compliance review can run in parallel with the program.

APPENDIX · HOW WE ENGAGE

Three engagement models matched to buyer and scope.

A managed operating model — execution pods, SLA-backed delivery, or outcome-based commercials.

01

Managed execution pods

Your team, extended

Unified pods of domain SMEs + AI operators working as an extension of client teams. Fast to stand up; clear ownership.

02

Managed services

SLA-backed delivery

Straive runs priority CX lanes or EOps functions against agreed SLAs. Governance, QA, and insight packs included.

03

Outcome-based

Pay for results

Commercials tied to defined outcomes — deflection, cycle time, conversion, collections effectiveness — with shared baselines.

Hybrid constructs are common: pods inside one function, managed services on another, outcome upside on a shared KPI.

APPENDIX · COMMERCIAL MODEL

How accounts scale predictably.

Flexible commercials matched to ROI hurdles — with a clear Land → Expand → Sustain path.

01

Land

Discovery & scoped start

Workshop, baseline, and first-step execution on one CX lane or EOps function — value without disruption.

02

Expand

Adjacent workflows

Add tiers, channels, or functions on the same governed layer once the baseline is proven.

03

Sustain

Operate & improve

Steady-state delivery, insight packs, continuous reimagine cycles, and commercial constructs that hold over time.

APPENDIX · RETURN ON INVESTMENT

Measured outcomes across CX and Enterprise Operations.

Reported against a shared baseline — drawn from separate CX and enterprise-ops programs, not one composite client.

01

CX economics

Cost-to-serve improvements you can defend in a shared-services review.

Deflection, AHT, CSAT, and peak-season capacity without linear headcount.

02

Enterprise Ops economics

Cycle-time and accuracy gains in F&A, legal, and demand motions.

Collections effectiveness, agreement throughput, conversion lift.

03

Qualitative return

Insight packs from operated volume — where journeys stall, which exceptions repeat, what leaders should watch next.

APPENDIX · TECH VS MANAGED SERVICES

Can we buy the technology for our team?

Yes — with conditions. Most durable value lands when technology is embedded in a managed or hybrid model.

01

Tech-enabled

Platform and digital workers on your stack. Your teams operate day-to-day. Best when process maturity already exists in-house.

02

Hybrid (typical)

Straive runs priority CX lanes or EOps functions; you retain policy and exceptions. Shared SLAs and insight packs.

03

Managed-led

Insight packs from operated volume — where journeys stall, which exceptions repeat, what leaders should watch next.
